

Wolf Clinical

EMR software that thinks the way you do.

Highlights of Wolf Clinical

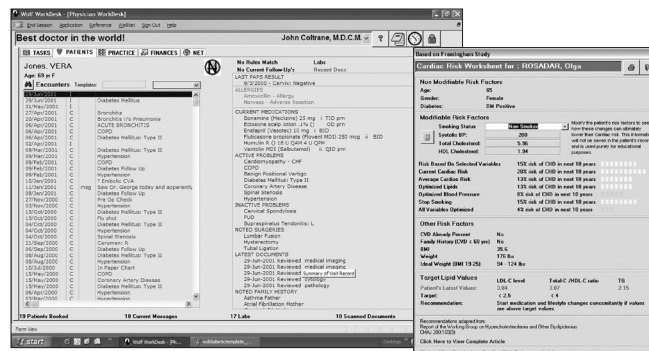

- Intuitive clinical software that “thinks the way doctors think”
- Gain easy access to comprehensive patient information including allergies, problem lists, medications, and encounter notes
- Use Wolf Practice Search to track patient demographics; proactively use rules to notify physicians and front office staff to schedule follow ups
- Check for adverse drug-to-drug, drug-to-allergy and drug-to-condition reactions
- Access over 100 clinical SOAP templates for visit types including pre-natal appointments, depression, ear infections, headaches, neck pain and many more
- Review medications and lab results in graphs and easy-to-understand charts to spot trends and improve patient communication
- Manage prescriptions, referrals and follow-ups; generate complete referral letters and medical summaries in just seconds!
- Use Chronic Disease Management (CDM) tools to monitor patients with complex diseases; combine with Practice Search to proactively schedule follow-up visits and tests for these patients

Wolf Clinical is the heart of Wolf’s electronic medical record (EMR) suite. Designed by physicians for physicians, Wolf Clinical helps physicians track, monitor and manage patients’ clinical information quickly and accurately.

With Wolf Clinical physicians can quickly enter encounter notes in standardized online charts; generate prescriptions; issue complete referral letters and medical summaries; access relevant electronic lab results—even show patients their lab results and medications in an easy-to-understand graphical format.

Physicians have access to over 100 visit-specific templates with the program; templates can be customized easily to fit any doctor or clinic-specific needs. These templates help speed the complete documentation of patient encounters for a wide variety of visit types including pre-natal appointments, well-baby checks, depression, ear infections, headaches, neck pain and many more.

Finally, Wolf Clinical includes additional modules that enhance the value of the EMR to the physician, including Wolf Chronic Disease Management, a module to simplify the management of complex chronic disease patients; Wolf Practice Search, a patient demographic tool that harnesses patient and clinic data so you can proactively manage your patients and your business; and Wolf Drug Interaction, a drug interaction system that proactively checks for adverse drug-to-drug, drug-to-allergy and drug-to-condition reactions.

“Nothing beats using Wolf for my practice. It is an extremely user-friendly system which boosts efficiency in our office and has significantly improved the quality of patient care. Wolf allows me to quickly access patient charts in the office and at home and is especially useful when I’m on call or just at home working on referrals/letters/medico-legal letters without bringing any charts home. I cannot imagine working in an office without EMR. Needless to say, Wolf has made my job as a family physician and maternity care provider so much more enjoyable!”

Winnie Su, MD,
Su & Chan Family Practice and Obstetrics, Vancouver BC

“Having patient information in Wolf saves me time because I’m able to print prescriptions and create and print referral letters, sick notes, and letters to specialists more quickly. I can create a very detailed letter with a simple click of a button. I always get good feedback from specialists, who often comment that the letters I create are very helpful.”

Zafer Mian, MD and Medical Director
Harbourfront Health and Wellness Centre, Toronto ON

Wolf Clinical

Overview of Features

Use clinical software that thinks the way you do.	SOAP and consultant-specific templates	Access over 100 SOAP templates or quickly customize your own; Wolf Clinical comes with more SOAP templates than any other Clinical program! Designed by physicians for physicians, these templates cover a wide variety of visit reasons from allergies and back pain to earaches and depression.
Be more proactive in your patient outreach to enhance patient outcomes and increase billings.	Wolf Practice Search	Quickly create complex queries and immediately find the answers in your practice. Results can be easily integrated into the Wolf follow-up system for patient recall, or saved as rules that trigger when the patient is in the office. Easily incorporate clinical guidelines and best practices into your practice.
Use the software the way you are most comfortable.	Flexible data entry options for quick patient encounters	Dictate encounter notes directly into the system from voice recognition software; type notes using the keyboard or use a stylus and your Tablet PC. Create your own commonly used 'pick list' of words, phrases, and questions to speed up the recording of encounter notes.
Saves hours of data re-entry and formatting for you and your staff.	Send-to-Word®	Standard forms, letters and other documents can be automatically output from the patient record to formatted Microsoft® Word documents to be faxed, emailed, mailed, or printed.
Reduce medical errors with Canada's leading drug interaction database.	Drug Interaction Module	Licensed from Cerner Multum, receive proactive alerts when a medication is found to interact adversely in a drug-to-drug, drug-to-allergy, drug-to-allergy category, or drug-to-condition scenario.
Order multiple investigations with a single click.	Quick Referrals	Define frequently and commonly used referrals and tests to select one at a time or in multiples.
Be proactive with powerful CDM tools for all your chronic patients.	Chronic Disease Management Tools	Ease the difficult task of managing complex chronic diseases such as asthma, hypertension, and diabetes with disease-specific templates, flowsheets, and proactive alerts to help monitor patients for follow-up visits and tests.
Your familiar prenatal form; only better.	Prenatal Module	A comprehensive module that tracks the current pregnancy; obstetrical, gynecological, PM, and family histories; physical examination notes; antenatal visit records; and delivery records.
Have the program remind you of pediatric milestones.	Child Development Records	Prompts you with age-appropriate examination, lab, social and developmental fields. Integrates with Wolf Vaccination tracking program and growth charts.
No more rejected form fees.	Electronic WCB Reports	Electronic WCB forms are integrated with your clinical visit. Write your note and automatically send to WCB along with billing information.
Work with patients to help them understand what they can do to lower their risk for cardiovascular disease.	Wolf Cardiac Risk Calculator	Based on the Framingham study, provides an individualized assessment of the patient's current risk and potential risk if the patient modified specific risks, as well as current values of cardiac risk factors. Print as a patient handout.
Quickly detect patterns and improve patient communication.	Graphing	Graph electronic lab results, blood pressure, height and weight to quickly detect patterns over time. Patient medications can also be listed on the graph to provide a visual correlation between graphed results and medications at the time of any changes in the graph.
Enrich your notes with patient-specific illustrations.	Draw Pictures	Draw directly on any computerized illustration and save to patient's chart; create your own diagrams to record findings and illustrate information to patients.
